Texas State Operations Center

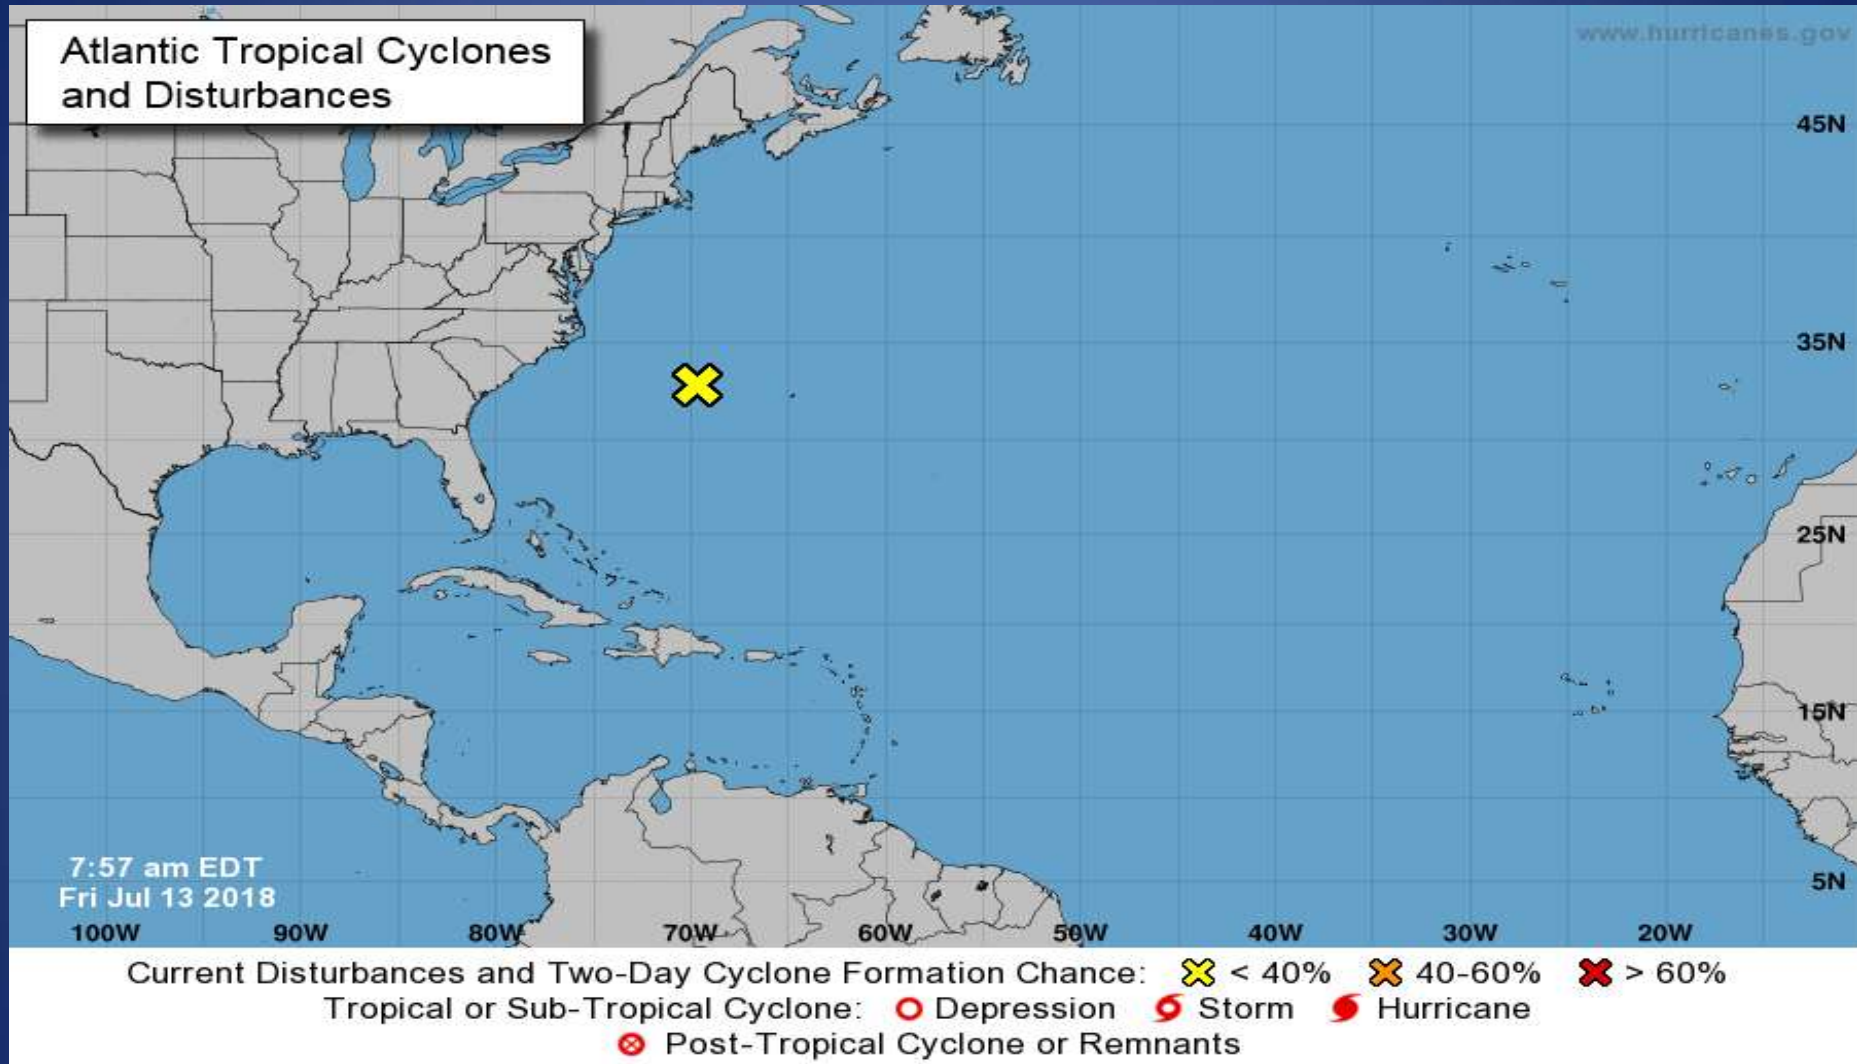

Situation Awareness Brief

Friday, July 13th 2018
As of 0900 CST

Tropical Weather Awareness

An area of low pressure, associated with the remnants of Beryl, is located about 300 miles west of Bermuda. The associated shower and thunderstorm activity remains disorganized due to strong upper-level winds. These winds are expected to become even less conducive for subtropical or tropical development over the next day or two while the low moves north-northeastward at about 10 mph, and additional development will be limited once the low reaches colder waters by Saturday night or Sunday.

Incidents Reported to the State Operations Center (last 24 hours)

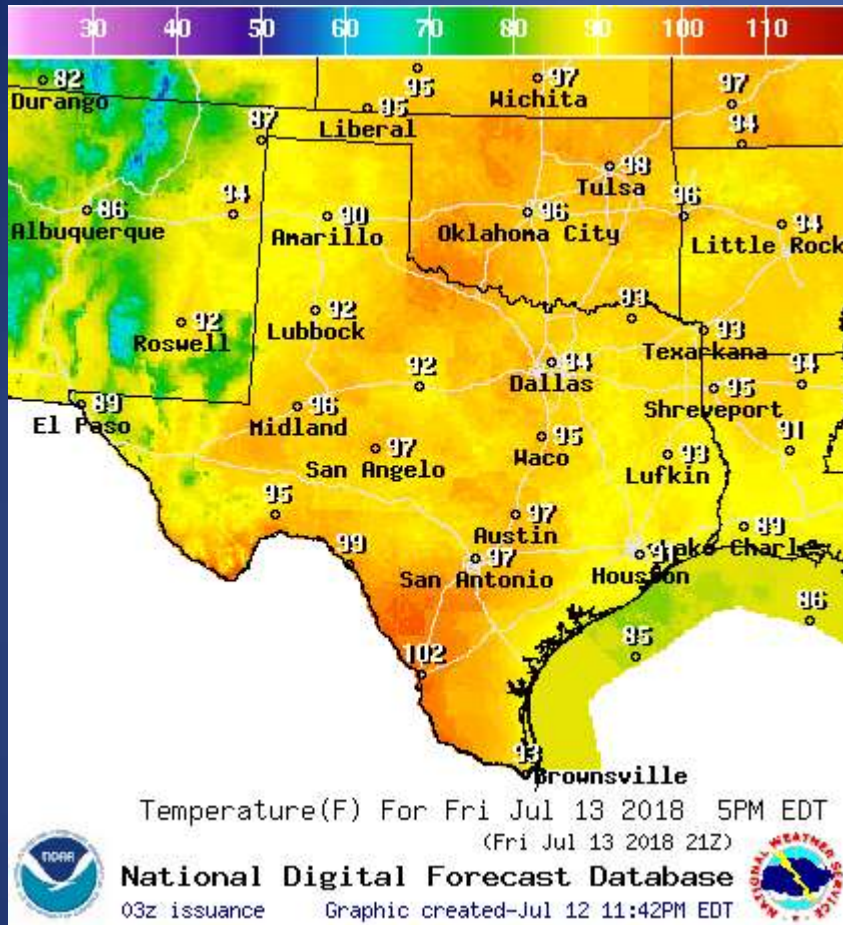

DATE	EVENT / INCIDENT	LOCATION (City/County)	Final Report: Y/N
07/12/18	Initial Report of a Water System Outage	Horseshoe Bend/ Parker County	N
07/12/18	Silver Alert Activation for Grayson County Sheriff's Office	Grayson County	N
07/12/18	Silver Alert Discontinuation for Grayson County Sheriff's Office	Grayson County	Y

Severe Weather Outlook Friday, July 13, 2018

Hazardous Weather

Under the influence of a large ridge of high pressure system centered Northeast of the Four State Region and expansion into the area expected to allow daytime high temperatures in the middle and upper 90s. These reading along with the relative humidity values will result in afternoon heat indices from 104-108 degrees. Will see showers and thunderstorms developing from mid to late morning and increasing during the afternoon. Convection will decrease during the evening with overnight low temperatures ranging from the middle to upper 70s.

Isolated showers and thunderstorms are possible today, mainly along the seabreeze. Above normal high temperatures are expected, with triple digit heat in the upper valley and western ranchlands. Favorable conditions continue on coastal waters with a light to moderate chop on the bay and Gulf seas of 2 feet or less
